1 Introduction

1.1 Basic Commands

- **Bold** *Italic* Underline

1.2 Math

- $\frac{1}{2} \sqrt{2} x^2 x_i$
- $x_i = \frac{1}{2}$

1.3 Tables

Column 1	Column 2	Column 3
1	2	3
4	5	6

1.4 Figures

Figure 1: This is a scary figure. I advise running.

2 Mathematics

2.1 Subscripts and Superscripts

- Create a subscript with the `_` character: x_i
- Create a superscript with the `^` character: x^2
- You can also combine them: x_i^2

2.2 Brackets and Parentheses

- Round brackets: (function arguments)

$$\left(\frac{1}{2}\right)$$

- Square brackets: (vectors)

$$\left[\frac{1}{2}\right]$$

- Curly brackets: (sets)

$$\left\{\frac{1}{2}\right\}$$

- Absolute value: (absolute values)

$$\left|\frac{1}{2}\right|$$

- Floor: (floor function, i.e. rounding down)

$$\left\lfloor\frac{1}{2}\right\rfloor$$

- Ceiling (ceiling function, i.e. rounding up)

$$\left\lceil\frac{1}{2}\right\rceil$$

- Angle brackets: (inner product)

$$\left\langle\frac{1}{2}\right\rangle$$

- Double angle brackets: (outer product)

$$\left\langle\left\langle\frac{1}{2}\right\rangle\right\rangle$$

2.3 Matrices

- Plain: a matrix with no brackets

$$\begin{array}{cc} 1 & 2 \\ 3 & 4 \end{array}$$

- Parentheses: a matrix with round brackets

$$\begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$$

- Square brackets: a matrix with square brackets

$$\begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$$

- Curly brackets: a matrix with curly brackets

$$\begin{Bmatrix} 1 & 2 \\ 3 & 4 \end{Bmatrix}$$

- Absolute value: a matrix with absolute value brackets

$$\left| \begin{array}{cc} 1 & 2 \\ 3 & 4 \end{array} \right|$$

- Double absolute value: a matrix with double absolute value brackets

$$\left\| \begin{array}{cc} 1 & 2 \\ 3 & 4 \end{array} \right\|$$

2.4 Fractions and Binomials

- Binomials:

$$\binom{n}{k}$$

- Fractions with numbers:

$$\frac{1}{2}$$

- Fractions with text:

$$\frac{\textit{numerator}}{\textit{denominator}}$$

- Function arguments:

$$f(x) = \frac{f(x+h) - f(x)}{h}$$

- Nested fractions:

$$\frac{1}{1 + \frac{1}{x}}$$

- Fractions with subscripts:

$$\frac{x_i}{x_{i+1}}$$

- Overflow example:

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \frac{1}{a_3 + \ddots}}}$$

2.5 Aligning Equations

- Aligning equations with the `align` environment:

$$a = b \tag{1}$$

$$c = d \tag{2}$$

- Use the asterisk to align equations without numbers:

$$a = b$$

$$c = d$$

- Two columns:

$$a = b$$

$$c = d$$

$$e = f$$

$$g = h$$

- Lopsided:

$$\begin{aligned} \frac{1}{2} &= a \\ &= c \end{aligned}$$

- Displaying large equations:

$$\begin{aligned} p(x) = 3x^6 + 14x^5y + 590x^4y^2 + 19x^3y^3 \\ + 14x^2y^4 + 3xy^5 + y^6 + 3x^5 + 14x^4y + 19x^3y^2 \end{aligned}$$

- Grouping equations:

$$a = b$$

$$c = a + b$$

2.6 Operators

- Summation: to calculate the sum of a series

$$\sum_{i=1}^n x_i$$

the sum of x_i from $i = 1$ to $i = n$

- Product: to calculate the product of a series

$$\prod_{i=1}^n x_i$$

the product of x_i from $i = 1$ to $i = n$

- Union:

$$\bigcup_{i=1}^n x_i$$

- Intersection:

$$\bigcap_{i=1}^n x_i$$

- Integral:

$$\int_a^b x$$

- Double integral:

$$\iint_a^b x$$

- Triple integral:

$$\iiint_a^b x$$

- Contour integral:

$$\oint_a^b x$$

- Limit:

$$\lim_{x \rightarrow 0} x$$

- Logarithm:

$$\log_2 x$$

- Derivative:

$$\frac{d}{dx} x$$

- Partial derivative:

$$\frac{\partial}{\partial x} x$$
